Full Coverage Crowns: Restorations for Deciduous and Permanent Teeth in the Developing Dentition

ABSTRACT

Over the years, many types of crowns have been developed and advanced to aid the clinician in rehabilitating deciduous teeth. This lecture and hands-on workshop discuss the various options that are available for full coverage restorations for the primary dentition.

The advantages and disadvantages of each approach will be discussed. This lecture goes through the procedures from Stainless Steel Pediatric crowns to Zirconia crowns to Laser Sintered Hybrid Glass crowns when restoring the deciduous tooth.

A step-by-step procedure that provides a simplistic approach when restoring the deciduous tooth will be taught through the use of minimally invasive aesthetic edelweiss PEDIATRIC CROWNS.

LECTURE LEARNING OUTCOMES

- Following the lecture, delegates will be able to understand the various treatment options available for restoring deciduous teeth. They will be able to transfer this knowledge to the clinical situation and be able to place pediatric crowns on the child patient.
- To identify and fulfil unmet patient's needs to boost treatment options within the office and optimize the practice by applying the state-of-the-art biomimetic materials and techniques that is time and cost saving.
- Reach a high level of competence in the placement of pediatric crowns, from the planning to the realization of the treatment during our hands-on sessions.

HANDS-ON WORKSHOP LEARNING OUTCOMES

- Delegates will have the opportunity to work firsthand with edelweiss PEDIATRIC CROWNS under the expert guidance of Dr. Lampl and Dr. Moodley. All delegates will be given materials and the edelweiss PEDIATRIC CROWNS to place on plaster cast models.
